- How to Create DDI Metadata?
- Some Thoughts

Finnish Social Science Data Archive

The Finnish Social Science Data Archive (FSD) provides a single point of access to a wide range of digital research data for learning, teaching and research purposes. The archive is a national resource centre funded by the Ministry of Education and Culture. All services are free of charge.

The FSD promotes open access to research data as well as transparency, accumulation and efficient reuse of scientific research and is the first organisation in Finland to have been awarded the [Data Seal of Approval \(DSA\)](#).

FSD Bulletin is the electronic newsletter of the Finnish Social Science Data Archive.

Data Service Portal **Aila** >

Aila provides access to data archived at the Finnish Social Science Data Archive.

Citing Archival Data >

Data sources used in research must be cited accurately and in sufficient detail.

Data Management Guidelines >

Best practice guidelines for managing research data across the whole life cycle of data.

FSD Bulletin

FSD Bulletin is the electronic newsletter of the Finnish Social Science Data Archive.

The Finnish Social Science Data Archive

- National resource center for research and teaching for social sciences
 - 2015 > health research and humanities
- Basic services free of charge
 - data curation, long-term preservation, information services, consultation in data management planning, data dissemination for secondary use
- National Service Provider for CESSDA

Data disseminated by FSD 2011 – 15.9.2015

- The launch of Aila Portal in May 2014 made data access easier

1. Log in to Aila
2. Find relevant data
3. Download data easily and quickly

Aila Data Service

Aila provides access to datasets archived at the Finnish Social Science Data Archive and their study descriptions in Finnish and English.

All users can browse and search data, read study descriptions and download open access data. By registering, users can download data which have access conditions. Services are free of charge.

Students and staff from Finnish universities can register with Aila using the username and password issued by their institution (HAKA authentication). Other users apply for a username from FSD User Services.

Maintenance window on Tuesdays
7-10 am

Authors

- Finnish Business and Policy Forum (EVA)

Keywords

European integration, businesses, decision making, health services, leadership, occupational life, parliamentary elections, safety and security, taxation, well-being

Abstract

The main themes of the survey were leadership, work, taxation and security of Finland.

First, the respondents were asked to what extent they agreed with a number of statements relating to, for instance, political parties and the political system, science and technology, employment, economic growth, taxation, changes in society, health care, environment, entrepreneurship, public services, Finland's foreign relations, NATO membership, regulation of alcohol, social services, national debt, etc.

Regarding the parliamentary elections of 2015, the respondents were asked what the new government should focus on (e.g. lowering taxation, increasing funding for education, crime prevention, cutting public expenditure) and how well certain characteristics and descriptions (e.g. "patriotic always promotes Finland's interests") applied to the four prime minister

The dataset is available **for research, teaching and study.**

Forthcoming: model-based specification

- DDI Moving Forward process since October 2013 ("DDI4")
 - First draft release was put out for comment in May 2015
- Next version of DDI specification will be based on an information model
- Aims at breaking disciplinary barriers to document data about humans and their impact more broadly
- Provides support to new types of data, for example:
 - data captured by instruments like blood pressure gauges and MRI scans
 - data from administrative registers
 - data from various web sources

DDI-L Modules

Archive	Contains information concerning the organization providing archival functions, the position of the related metadata and data within the organization, and preservation/provenance information about the metadata and data including LifecycleEvents.
CodeList	A special form of maintainable that allows a single codelist to be maintained outside of a CodeListScheme.
Comparison	Contains information on comparison of similar metadata objects using mapping between a source and target object.
ConceptualComponent	Contains descriptions of Concepts, Universes, DataElements, GeographicStructures, and GeographicLocations.
DataCollection	Contains information on data collection, capture, methodology, and processing of data.
DDIProfile	A specialized meta-model structure that specifies the elements in DDI used by an application organization, or project and how they are used.
Group	A publication module that pulls together multiple StudyUnits with either an intended relationship (i.e., longitudinal study) or an ad-hoc relationship (i.e., studies on aging used within an instructional package).
LocalHoldingPackage	A publication structure that allows an archive or library to bind locally produced metadata to deposited metadata without altering the original metadata set.
LocalGroupContent	Locally produced Group content within a LocalHoldingPackage.
LocalResourcePackageContent	Locally produced ResourcePackage content within a LocalHoldingPackage.
LocalStudyUnitContent	Locally produced StudyUnit content within a LocalHoldingPackage.
LogicalProduct	Contains information on the intellectual structure of the data (i.e., Variables, NCubes), including CategorySchemes, CodeListSchemes, and information on how the data are organized into LogicalRecords and the Relationship of those records to each other.
PhysicalDataProduct	Contains information on the physical structure of the data including file structures and RecordLayout structures. Links to the LogicalRecord.
PhysicalInstance	A metadata record for a data file providing identification information for the data file, a link to the RecordLayouts found in the data file, and summary statistics for the data file.
ResourcePackage	A publication structure that allows any maintainable object that is not a publication package to be published as a reusable resource outside of the context of a specific study.
StudyUnit	A publication structure for a specific study. Structures identification information, full bibliographic and discovery information, administrative information, all of the reusable delineations used for response domains and variable representations, and modules covering different points in the lifecycle of the study (DataCollection, LogicalProduct, PhysicalDataProduct, PhysicalInstance, and DDIProfile).

DDI-L Schemes

CategoryScheme	Categories provide enumerated representations for concepts and are used by questions, code lists, and variables
CodeListScheme	Code lists link a specific value with a category and are used by questions and variables
ConceptScheme	Concepts express ideas associated with objects and means of representing the concept
ConceptualVariableScheme	Links a concept with a specific object
ControlConstructScheme	Control constructs represent types of constructs used to represent a process or questionnaire flow (Sequence, Statement, IfThenElse, question construct, Loop, etc.)
GeographicLocationScheme	Locations are specified by type of structure, name, codification, and definition of physical location
GeographicStructureScheme	Define the structure of geographic hierarchies used to describe geographic area types
InstrumentScheme	Instruments include any physical means of capturing data
InterviewerInstructionScheme	Instructions related to the interpretation or process of capturing data (Interviewer may be an individual or agent, such as a computer, or the interviewee).
NCubeScheme	NCubes are dimensional data where there is a relationship between the individual cells of data (i.e. statistical table, correlation table, etc.)
ManagedRepresentationScheme	Reusable representations of numeric, textual, datetime, scale or missing values types.
OrganizationScheme	Descriptions of organizations and individuals and their relationships.
PhysicalStructureScheme	Describes the overall physical structure of data records (i.e., storage formats, record parts, default values and types)
ProcessingEventScheme	Processing events covering cleaning operations, control operations, data appraisal, weighting, and the applied use of processing instructions.
ProcessingInstructionScheme	General and Generation Instructions used in processing events, data capture, and generation of variables.
QualityStatementScheme	Statements providing information on standards and/or actions taken to ensure quality of data, metadata, and processes.
QuestionScheme	Contains Question Items, Question Grids, and Question Blocks used by Control Constructs in creating questionnaires.
RecordLayoutScheme Record	Layouts provide the specific link between the description of a variable or NCube cell with the physical storage location in a data file type.
RepresentedVariableScheme	The core reusable content of a variable providing the concept, object (universe), and representation description.
UniverseScheme	A hierarchical representation of the universes (populations) represented within a data collection
VariableScheme	A list of the variables, their structure, representation, source information, and expression.

LISS panel data

The LISS panel provides academic researchers from the Netherlands and abroad with the opportunity to field their surveys in the panel. The data obtained by these studies are published and can also be used by other researchers.

In addition to the studies proposed by external researchers, the LISS Core Study is conducted each year. This longitudinal study provides a wide range of data on the panel members that can be combined with other survey data.

The published LISS panel data can be accessed for own scientific, policy or socially relevant (i.e. non-commercial) research. Use of the data for paid projects for third parties is only allowed against payment.

To download the survey data you need to sign a statement confirming that you agree to the conditions. The statement can be found at the [LISS data archive project website](#).

The LISS panel data are available at www.lissdata.nl

Response Overview

In November 2007, a questionnaire on health was administered to the LISS panel. The questionnaire was repeated in February 2008 for those panel members that had not completed the questionnaire in November.

Response: Selected number of household members: 8478 (100%)

Nonresponse: 1780 (21.1%)

Response: 6698 (78.9%)

Complete: 6625 (78.1%)

Incomplete: 73 (0.9%)

Collection Events

Data Collection Period: 2007-11-05 to 2007-11-28
Sample: all LISS panel members aged 16 years and older
Data Collection Mode: internet survey
Fieldwork Organization: CentERdata
Fieldwork Note: a reminder was sent twice to non-respondents

Data Collection Period: 2008-02-04 to 2008-02-26
Sample: LISS panel members who had not responded to or participated in the first measure
Data Collection Mode: internet survey
Fieldwork Organization: CentERdata
Fieldwork Note: a reminder was sent twice to non-respondents

Questionnaire Health2007

Description This questionnaire was originally conducted in Dutch.

Study Unit [Wave 1](#)

	Question	Version	Question Text	Answer Type
1	intro	1.0.0	This questionnaire is about health.	
2	ch004	1.0.0	How would you describe your health, generally speaking?	Categories
3	ch005	1.0.0	Can you indicate whether your health is poorer or better, compared to last year?	Categories
4	ch011-ch015	1.0.0	The following questions are about how you felt over the past month. For every question, please choose the answer that best describes how you felt during this past month. This past month	
5	ch016	1.0.0	How tall are you?	Numeric
6	ch017	1.0.0	How much do you weigh, without clothes and shoes?	Numeric
7	ch018	1.0.0	Do you suffer from any kind of long-standing disease, affliction or handicap, or do you suffer from the consequences of an accident?	Categories
8	ch019	1.0.0	Can you briefly describe what you suffer from?	Text (max. 255 characters)
9	ch020	1.0.0	To what extent did your physical health or emotional problems hinder your daily activities over the past month, for instance in going for a walk, walking up stairs, dressing yourself, washing yourself, visiting the toilet?	Categories
10	ch021	1.0.0	To what extent did your physical health or emotional problems hinder your social activities over the past month, such as visiting friends and acquaintances?	Categories
11	ch022	1.0.0	To what extent did your physical health or emotional problems hinder your work over the past month, for instance in your job, the housekeeping, or in school?	Categories
12	ch023-ch032	1.0.0	Below you will find a number of actions that some people have difficulties with. Can you indicate, for each activity, whether you can perform it without any trouble, with some trouble, with a lot of trouble, or only with the help of others? This question does not apply to problems which you expect will not last longer than three months.	
13	ch033-ch045	1.0.0	Below you will find a number of actions that some people have difficulties with. Can you indicate, for each activity, whether you can perform it without any trouble, with some trouble, with a lot of trouble, or only with the help of others? This question does not apply to problems which you expect will not last longer than three months.

DDI-L: Management of Metadata

- Emphasis on re-use of metadata
- Identification and versioning of metadata
- Grouping of studies and expressing relationships between them
 - Inheritance mechanism allows metadata to be shared by studies
- Support for comparison
 - Comparable "by design" > Grouping
 - Mapping or "ad-hoc" comparison > Comparison module for statements/assertions about the equivalence of the metadata items

DDI-L: Mapped Relationship to Other Standards

- DDI-C and earlier versions
- Dublin Core (Basic Bibliographic Information)
- MARC (Bibliographic Information)
- GSIM (Generic Statistical Information Model)
- ISO/IES 11179 Data Registry
- ISO 19118 (Geography)
- SDMX (Aggregate data)
- METS (Content Wrapper)
- PREMIS (Preservation)

DDI Controlled Vocabularies

- Many elements support the use of an external CV
- DDI Alliance publishes a set of CVs commonly used in social science research, for example:
 - Analysis Unit
 - Data Type
 - Lifecycle Event Type
 - Mode of Collection
 - Response Unit
 - Time Method

DDI RDF Vocabularies

- DDI-RDF Discovery Vocabulary (Disco)
 - Supports the discovery of microdata sets and related metadata using RDF technologies in the Web of Linked Data
- PHDD - Physical Data Description
 - Description of the physical properties of existing or published data (tables) in a rectangular format.
- XKOS - Extended Knowledge Organization System
 - XKOS leverages the Simple Knowledge Organization System (SKOS) for managing statistical classifications and concept management systems

Benefits from using DDI

- Richer metadata
- Exchangable metadata
- Reusable metadata
 - Cost effective
 - Avoid errors
- Enables building of question banks, variable banks, reusable code lists,...
- Supports metadata-driven processes
- Supports multilingual documentation
- International, open standard
- Strong and growing user community

The DDI Alliance

- An international collaboration dedicated to establishing metadata standards and semantic products for describing social science data, data covering human activity, and other data based on observational methods.
- An unincorporated, self-sustaining membership organization whose members have a voice in the development, promotion, and dissemination of DDI specifications.

(DDI Alliance Charter and Bylaws)

DDI Alliance Members

- University of Alberta, Canada
- Australian Bureau of Statistics (ABS)
- Australian Data Archive (ADA)
- University of California, Berkeley -- Computer-Assisted Survey Methods Program and UCDATA
- Centre for Longitudinal Studies, Institute of Education, University of London (Associate Member)
- Centro De Investigaciones Sociologicas (CIS), Spain
- Colectica (Associate Member)
- Cornell Institute for Social and Economic Research (CISER)
- Danish Data Archive
- Data Archiving and Networked Services (DANS), The Netherlands
- Epidemiology France, Aviesan - ITMO Santé Publique
- Eurostat
- Finnish Social Science Data Archive
- Food and Agriculture Organization (FAO)
- German Institute for International Educational Research (DIPF)
- German Socio-Economic Panel Study (SOEP)
- GESIS - Leibniz Institute for the Social Sciences
- University of Guelph
- Institute for Social and Economic Research (ISER)
- Institute for the Study of Labor (IZA)
- Inter-university Consortium for Political and Social Research (ICPSR)
- University of Kansas, Institute for Policy and Social Research (IPSR) (Associate Member)
- Massachusetts Institute of Technology (MIT)
- University of Minnesota, Minnesota Population Center
- National Institute of Statistics and Economic Studies (INSEE)
- Norwegian Social Science Data Service (NSD)
- Open Data Foundation (Associate Member)
- Research Data Centre of the German Federal Employment Agency, Institute for Employment Research (IAB)
- Stanford University
- Statistics New Zealand
- Survey Research Operations, University of Michigan
- Swedish National Data Service (SND)
- Swiss Foundation for Research in Social Sciences (FORS)
- United Kingdom Data Archive
- University of Toronto Libraries
- University of Toronto Scholars Portal
- University of Washington, Center for Studies in Demography & Ecology (CSDE)
- U.S. Bureau of Labor Statistics (Associate Member)
- World Bank, Development Data Group (DECDG)

DDI being used around the World

- Data Archives
- National Statistical Institutes
- Research Groups (at Universities)
- Data producers and publishers

How to create DDI metadata?

- Enter information manually into the DDI-XML files
- Export from statistical packages or survey systems with tools like Stat/Transfer or Colectica
- Use a metadata editor
- <http://www.ddialliance.org/resources/tools>

Some Thoughts

- Researchers' priority is (rightly so) research, not managing data
 - Researchers need infrastructure and support services
- Field of metadata standards is overwhelming and complex
 - an organisation usually has a pressing need to get a system running up to support a specific task
 - discipline, organisation and/or country specific metadata efforts have led (and will lead) to overlapping standards
- There is not and probably will never be a single metadata standard that would be simple, cover everything and satisfy all metadata needs
 - The solution is to apply several complementary standards.
- Continuous work is needed on both developing the existing and new standards and also on how the standards can be best combined.
- Cooperation and awareness is essential
 - both national and international, as well as across disciplines

Arts and Humanities

[DDI - Data Documentation Initiative](#)  Edit

A widely-used international standard for describing data from the social, behavioral, and economic sciences, the DDI metadata specification supports the entire research data life cycle.

Sponsored by the DDI Alliance, DDI version 3.2 was released in 2014.

[MIDAS-Heritage](#)  Edit

A British cultural heritage standard for recording information on buildings, archaeological sites, shipwrecks, battlefields, areas of interest and artefacts.

Sponsored by the Forum on Information Standards in Heritage, MIDAS Version 1.1 was released in 2004.

[OAI-ORE - Open Archives Initiative Object Reuse and Exchange](#)  Edit

The goal of these standards is to expose the rich content in aggregations of Web resources to applications for authoring, deposit, exchange, visualization, reuse, and preservation. The standards support the challenges of digital scholarship and scholarly communication, and the need for cyberinfrastructure to support that scholarship, with standards that generalize across all web-based information including the increasing popular social media.

Engineering

[CIF - Crystallographic Information Framework](#)  Edit

A well-established standard file structure for the archiving and distribution of crystallographic information for reporting crystal structure determinations to Acta Crystallographica and other journals.

Sponsored by the International Union of Crystallography, the current standard dates from 1997. As of 2014, the next version of the CIF standard is under consideration.

[CSMD-CCLRC Core Scientific Metadata Model](#)  Edit

A study-data oriented model, primarily in support of the ICAT data management infrastructure software, support data collected within a large-scale facility's scientific workflow; however the model is also designed to support scientific disciplines.

Sponsored by the Science and Technologies Facilities Council, there is reference to CSMD 3.0 developed in 2004, the latest full specification available is v 2.0, from 2004.

More Thoughts

- Documenting data well and making metadata and data easily accessible promotes cross-disciplinary research
- Ideally software would support creating and exporting metadata
- Long history of international co-operation within social science data archives > tools, services and mutual trust
- Continuous work needed
- Resources needed
- Coordination needed
- Committed organisations needed

- A lot of potential for partnerships and collaboration that can move all stakeholders forward!

EDDI15 – 7th Annual European DDI User Conference

Statistics Denmark (DST) and DDA/National Archive of Denmark

December 2, 2015 – December 3, 2015

Description

EDDI15 is organized jointly by DST - Statistics Denmark and the DDA - Danish Data Archive/National Archive of Denmark, GESIS - Leibniz Institute for the Social Sciences and IDSC of IZA - International Data Service Center of the Institute for the Study of Labor.

The conference will bring together DDI users and professionals from all over Europe and the world. Anyone interested in developing, applying, or using DDI is invited to attend and present.

The conference will provide presentations on a wide range of topics relating to DDI:

- Case studies
- Mature implementations
- Early implementations
- Interplay of DDI with other standards or technologies
- Projects in early phases in which DDI is under consideration
- Critiques of DDI

Thank you!
