Public consultation on EU funds in the area of investment, research & innovation, SMEs and single market

Introduction

'A stronger Union needs to be equipped with appropriate financial means to continue to deliver its policies. The Union has changed fundamentally in recent years, as have the challenges it faces. Our Union needs a budget that can help us achieve our ambitions. The Multiannual Financial Framework for the period after 2020 must reflect this.' (Commission Work Programme 2018)

The EU budget currently amounts to less than 1 euro per citizen per day. Although a modest budget, at around 1 % of the EU's gross national income or 2 % of all EU public spending, it supports the EU's shared goals by delivering essential public goods and tangible results for EU citizens. These include: investing in skills, innovation and infrastructure; ensuring sustainable food systems and developing rural areas; ensuring a clean and healthy environment and the protection of natural resources; promoting joint research and industrial projects; funding shared activities in the field of migration and security; and supporting development and humanitarian aid.

The current Multiannual Financial Framework — the EU's long-term budget — runs until the end of 2020. In 2018, the Commission will put forth comprehensive proposals for the post-2020 Multiannual Financial Framework and for the next generation of financial programmes that will receive funding. These programmes/funds provide financial support to hundreds of thousands of beneficiaries such as regions, towns, NGOs, businesses, farmers, students, scientists, and many others.

The Commission's proposals will be designed to make it possible for the EU to deliver on the things that matter most, in areas where it can achieve more than Member States acting alone. This requires a careful assessment both of what has worked well in the past and what could be improved in the future. What should the priorities be for future policies and programmes/funds? And how can they be designed to best deliver results on the ground?

As an integral part of this process and following on from the [Reflection Paper on the Future of EU Finances](#), the Commission is launching a series of public consultations covering all the major spending areas to gather views from all interested parties on how to make the very most of every euro of the EU budget.

The EU has developed a variety of instruments to stimulate investment and entrepreneurship to create jobs and growth. The Investment Plan for Europe, the so-called Juncker Plan, aims to unlock investment throughout Europe through to the European Fund for Strategic Investments (EFSI), which provides a EU guarantee to mobilise investment. The EFSI also complements other existing instruments like COSME that make it easier for small and medium-sized enterprises (SMEs) to access finance in all phases of their lifecycle – creation, expansion, or business transfer. Through EU support, businesses have easier access to guarantees, loans and equity capital.

Research and innovation are instrumental for addressing the EU's productivity gap and play a crucial role in providing solutions to many global challenges the EU and its citizens are facing today. In that context, the EU has made a major contribution with the Horizon 2020 programme.

The European Single Market is one of the EU's greatest achievements. It has fuelled economic growth and made the everyday life of European businesses and consumers easier. A well-functioning Single Market, including in its digital dimension, stimulates competition and trade, improves efficiency, raises quality, and helps cut prices. In that context, the EU has set up several programmes in a wide range of areas (health, food safety, customs...) to facilitate the free circulation of goods, services, capital and persons across the European continent.

Recent consultations already covered several policy areas, including on current performance and future challenges. The views already expressed by stakeholders in these consultations will be taken into account as part of the current process for the future MFF.

* 33 To what extent do the current programmes/funds add value, compared to what Member States could achieve at national, regional and/or local levels?

- To a large extent
- To a fairly good extent
- To some extent only
- Not at all
- Don't know

34 Please specify how the current programmes/funds add value compared to what Member States could achieve at national, regional and/or local levels. Please clearly indicate to which policies, programmes and funds your answer refer.

1500 character(s) maximum

The answer refers to the H2020 programme. The field of research and innovation is becoming more and more international each day. It is inefficient and in some cases impossible to overcome cross-border and cross-domain challenges with a national, regional and/or local approach only. R&I collaboration at the EU level is a successful example of European cooperation and integration. International collaboration through the H2020 programme is crucial to address common challenges such as improving the free movement of data, data networks and connections, and research e-infrastructures. In addition, the EU wide coordination increases legal certainty and impact possibilities, and collaboration is necessary to take fully advantage of e. g. digital and key enabling technologies.

35 Is there a need to modify or add to the objectives of the programmes/funds in this policy area? If yes, which changes would be necessary or desirable? Please clearly indicate to which policies, programmes and funds your answer refer.

1500 character(s) maximum

This answer refers to the H2020 programme. The current objective of ensuring European world-class research infrastructures (incl. e-infrastructures) accessible to all researchers in Europe and beyond – must remain key priority in the next Framework Programme for R&I. Research communities must be provided with support to overcome the barriers related to culture, policy, legislation, funding and service provisioning. Open Science and FAIR principles are important objectives.

Scientific excellence must be the main driver for research and innovation, and it should not be mixed with other purposes such as cohesion policy. Solid grant based funding is the best basis. Grants ensure stable funding, maximize outputs and ensure broad stakeholder involvement. The processes for proposals and reporting should be simplified. In addition to the current waterfall project model in which the project is planned in great detail in advance, the funding should allow agile projects with fixed aims but more open means to achieve the goals. To ensure success, the overall funding for the framework programme must be increased. Otherwise there is a risk of wasting some of the Europe's R&I potential.

36 The Commission has preliminarily identified a number of possible obstacles, which could prevent the current programmes/funds from achieving their objectives. To what extent do possible obstacles prevent the current programme/funds from achieving their objectives?

In relation to questions 36 and 38, excessive regulation can seriously damage the innovation potential of Europe. Thus, the EC and the Member States should work together towards increased coherence and transparency in regulation, policies and the research funding programmes. European regulation in the area of research and innovation should be scrutinized already when planning a Framework Programme, to avoid regulation from hindering opportunities to create new products and services.

There is also a need for more flexibility to adequately address upcoming opportunities. The current system is too rigid to react in a reasonable time frame. In addition, there is a need for better follow-up on current efforts. Now new knowledge and information is created in preference of utilising already created knowledge and information.
