

COMPUTATIONAL CHEMISTRY DAYS 2019

**Kuopio, Finland
29-30 Aug 2019**

The annual event gathers researchers from all aspects in the computational chemistry field together and provides contemporary insights from the drug design, quantum mechanics, molecular dynamics and other chemistry related computational methods. This year there will be plenty of opportunities for Postdocs and PhD Students to present their research and opinions, and we especially encourage students to participate (nominal registration fee). The Computational Chemistry Days are suitable for everyone interested, those who want to gain experience and learn of the hot-topics in the field.

Welcome!
